Work scope & Timeline Estimates

For: Inner Circle App | - *by Hasnain Khalid*

Project description:

Proposed Tech stack:

For this project, we have planned to use AI-assisted coding with React Native as the core development approach. This means our development process will be directly supported by AI coding tools throughout the build, allowing us to move significantly faster without compromising on code quality or performance. React Native enables us to build a single codebase that runs natively on both iOS and Android, making it the right choice for delivering a high-performance, cross-platform mobile experience using state of the art technology.

Other services we will be using:

React native: core platform tech stack

Supabase: User authentication, database, edge functions

Resend: For email notifications

OpenRouter: for LLM integration

Onesignal: For push notifications

Scope of work & Estimates:

Milestone 1:	Est time:
App Brand Design	

- Develop a brand design kit.
- Develop a foundational design language for the app.

Hks TECHLABS

Milestone 1: Est time:

Rebuilding the core application in ReactNative

What's Included:

- Setting up the database
- Login / Signup / Forget Password flow
- Main Profile page.
- Edit Profile
- Email Notifications
- Add daily mood
- View insights / Journaling streaks
- AI Insight summaries
- Help/FAQ & Send feedback functionality

Milestone 2: Est time:

Trusted Circle Feature

What's Included:

- Create trust circles.
- Invite other users (Both which were on the platform or invite via email)
- Share your mood and AI summaries with them.
- ⭐View who saw your AI summary and mood, something like read recipts of whatsapp.
- ⭐See other's AI summaries and mood boards.

> **Feature Idea**:
> We can also add ability to React to each other's moods and summaries.

Milestone 3: Est time:

Improvements to the existing version

What's Included:

- Needed for App
- Full check of the entire app. Make sure everything is perfect.
- link the circles list to page to somewhere on the app so it is accessible
- On the entry detail page, the open AI plugin for the AI insight isn't working.
- make forgot password page work correctly
- Redesign the Help and FAQ page
- Fix the mood breakdown card on the insights page for week, month, and year, so it is working how I explained in the video
- All pages that have permission settings, for example, can this user see your mood, make sure they work. (I don't think they do)
- on the new entry page, make sure the share toggle section works
- make sure notification works correctly, and users will be notified if they are selected too
- Consider if preview shared view page is necessary or not
- make sure the invite code on the sign-up page is working
- Make sure the trusted circle works correctly. How are you supposed to get your trusted connections?
- -Add widget on home screen. If a user is in a circle they can have a widget on the home screen of their phone that shows how the other users in the circle of their choice is feeling based on their selected mood. Whenever they make a new journal entry and select their mood it should change on the widget as well.
- Add frustrated as a mood
- When someone is making a journal entry and they type in a concerning word, for example "i'm going to kill myself". A message should pop up on the screen with a warning saying something along the lines of contact help with a phone number for them to call like a sucicide prevention hotline. There should be specific words that trigger that warning and they will all say different things when the message pops up, depending on what exactly the user said.
- Anything else that you think is necessary for the app to work correctly and be easy to understand. No one should be wondering/looking for how to do anything. Everything should be very straightforward.
- Talk are both of us before any big changes are made

Delivery time: ~TBD

☐ **Notes:**

Project questions:

1.

What we need to get started:

1. Bubble App access
2. OpenAI API Key
3. Apple & Google developer accounts
4. OneSignal Account for push notifications
5. Kick off meeting

Client Communications

Message 1:

—

Hi Muhammad,
I hope you're doing well.
Auguste and I were reviewing some of the features we previously discussed and wanted to clarify a few details before development begins to ensure we are all aligned on the scope of the app.
Regarding subscriptions, our understanding is that subscription functionality will be integrated into the app. We also wanted to clarify that we would like the subscription page and available plans to be displayed immediately after the final onboarding slide.
We also wanted to provide some additional clarification on the Circle feature. Our vision is to have both public and private circles:
Public Circles: Any user can create a public circle. Once created, users can join if they have the invite link or are invited directly.
Private Circles: Any user can create a private circle. Users can only join if they are invited by the circle owner or if they submit a request to join, which the owner can then approve or deny.
Please let us know if you have any questions or if you would like to discuss any of these details further.
Thank you, and we look forward to hearing from you.
Best regards,

Message 2:
We also wanted to make sure that the app is built to handle a large number of users at the same time, rather than just a small user base. We plan to start marketing the app before launch so that people are already aware of it when it goes live. Because of that, we want to make sure the backend and server infrastructure can support significant growth and increased traffic as more users join the platform. Please let us know if you have any other additional questions.

Message 3:
Just to make sure we're on the same page, when the Stripe subscription system is built, we would like Apple Pay to be integrated through Stripe as one of the payment options so that the checkout process is as simple and convenient as possible for users.

We also want subscriptions to renew automatically on a monthly or yearly basis, depending on the plan selected by the user. The subscription should remain active and continue billing automatically unless the user chooses to cancel it.

Please let us know if this aligns with what you had in mind.

Message 4:
Thanks for the clarification.

That makes sense — using Stripe's hosted checkout should simplify things a lot. Just keep us posted if you run into any limitations or restrictions once you check the documentation so we can adjust if needed.

Appreciate you looking into it.

I will be talking with Auguste within the next 20 minutes and we should be good too start and hire you by the end of the day!
